

## 4.4. Presentation of associated current sensors

Various types of current sensors can be connected to the DIRIS B-10L: solid core (TE), split core (TR/iTR) or flexible (TF).

This makes the DIRIS B-10L suitable with all types of new or existing installations. A rapid RJ12 connection makes wiring easy and reliable and prevents wiring errors. The DIRIS B-10L automatically recognises the type of sensor used and its current rating.

This guarantees the overall accuracy of the DIRIS B-10L + current sensor measurement chain.

### Recommendations:

For connecting the current sensors, use SOCOMEC cables only: RJ12 straight, twisted pair, unshielded, 600 V, -10°C / +70°C as per IEC 61010-1 version 3.0.

It is recommended that all the current sensors be installed in the same direction.

#### 4.4.1. TE solid-core current sensors

The TE solid-core current sensors are used to set up measurement points in a new or existing installation. They are easy to integrate as they are compact and respect the pitch of the circuit breakers. A wide range of accessories are also available for direct fitting on all type of cabling (cable, flexible or rigid busbar) or on a DIN rail support or plate.

Thanks to the specific link, they are recognised by the DIRIS B-30 and the overall accuracy of the measurement chain is guaranteed.

## 4.4.2. TR split-core current sensors

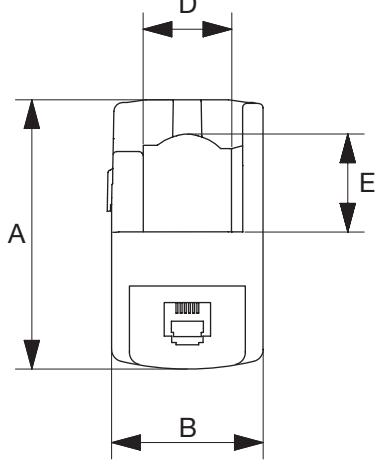

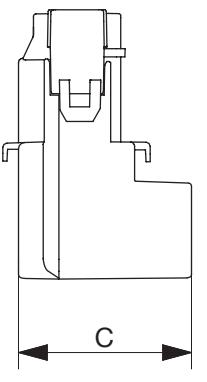

The TR split-core current sensors are used to set up measurement points in a new or existing installation without interfering with its cabling. Thanks to the specific link, they are recognised by the DIRIS B-10L and a high level of overall accuracy for the measurement chain is guaranteed.

### 4.4.2.1. Range

Four models are available from 25A to 600A to analyse several types of loads.

#### 4.4.3. TF flexible current sensors

The TF flexible current sensors use the Rogowski principle, covering a wide current range without saturation.

Their flexible design and easy opening system enables a quick installation inside electrical panels, making them particularly well suited for adding measuring points in existing electrical installations, especially when space is limited.

The secure lock technology prevents non voluntary openings of the Rogowski rope. Thanks to the specific link, they are recognised by the DIRIS B-10L and a high level of overall accuracy for the measurement chain is guaranteed.

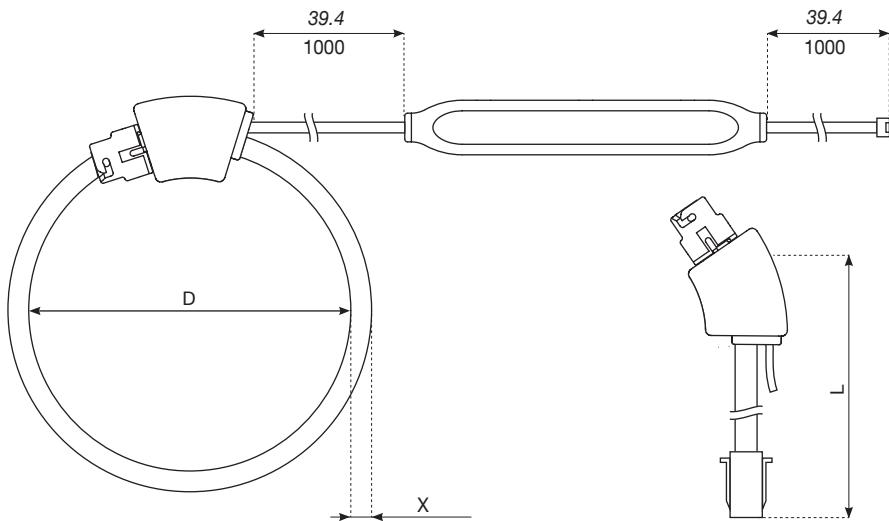

##### 4.4.3.1. Range

Six models are available, covering a large current range up to 6000 A with openings of different shapes and sizes. They include a compact and self-supplied integrator, required to shape the current signal.

#### 4.4.4. Adaptor for 5A or 1A current transformers

The adaptor allows you to retrofit an existing 1 A or 5 A secondary current transformer and user it with your DIRIS Digiware system. The overall DIRIS Digiware system accuracy is no longer guaranteed, as it depends on the accuracy of the associated CT (see standard «IEC 61557-12 annex F» for more information). The primary current is maximum 10000 A for a 5 A secondary CT and 2000 A for a 1 A secondary CT.
