## Smart building sensors

The indoor LoRaWAN® ERS sensors measure indoor climate and occupancy

### Battery powered & wireless

ERS sensors are completely wireless and powered by one or two 3.6V AA lithium batteries. The battery life is up to 10 years, depending on the sample interval, transmit interval, data rate, and environmental factors.

### Easy to configure

All ELSYS sensors are equipped with NFC (Near Field Communication) for easy configuration with a smart phone. You can change the sample rate, data rate, encryption keys, triggers, activation, and much more with our application Sensor Settings.

### Multiple options

Available sensors are temperature, humidity, light, CO<sub>2</sub>, accelerometer, sound, desk occupancy based on body heat or standing/sitting, and a motion sensor (PIR). Typical applications are indoor environment sensing, desk- or room occupancy.
